

Giving Smiles is an offline Windows desktop application for a single dental clinic. It runs the full clinical workflow — **Patient Intake** → **Signed Consent** → **Clinical Examination** → **Treatment Report** — with everything stored locally on the clinic computer. No internet, no cloud, no subscription.

Windows 10/11 100% Offline EN · ES · AR Installer + Portable

1 Accounts & Roles

Three accounts are created on first launch (default password **GivingSmiles2026**, changeable): **sidharthrane** — Admin, **drseitz** — Doctor, **frontend** — Front Desk.

Capability	Front Desk	Doctor	Admin
Sign in / change own password	✓	✓	✓
Register & edit patients (intake)	✓	✓	✓
Patient Check-In kiosk	✓	✓	✓
Capture signed consent	✓	✓	✓
View records, documents & images	✓	✓	✓
Print patient summary	✓	✓	✓
Clinical exam: tooth chart, notes, plan	view	✓	✓
Generate / print / email reports	view	✓	✓
Delete a patient	—	✓	✓
Clinic settings, SMTP, branding	—	—	✓
Manage user accounts	—	—	✓
Database backup & activity log	—	—	✓

2 Core Modules & Features

Authentication & Security

- Username/password login with **bcrypt-hashed** passwords; role-based access
- **Auto-logout after 30 minutes** of inactivity; admin **activity log**
- Hardened shell: context isolation, no Node integration, typed preload bridge, strict CSP, sandboxed document rendering, path-validated image channel

Patient Intake

- Full profile: name, DOB, contact, address, emergency contact
- **Quick-pick chips** for common allergies & conditions + an “Other” box; medications & dental history free-text
- **Auto-generated Patient ID** (e.g. GS-000123); **draft auto-save**; validation; fast search by name or ID

Patient Check-In Kiosk (patient-facing)

- Full-screen flow for a clinic touchscreen; **patient selects language** and the **whole form + chips translate** (English / Spanish / Arabic)
- Flows into consent & signature; saves the patient + signed consent ready for the doctor

Patient Record Dashboard

- Header with **red medical-alert banner** for allergies/conditions
- Tabs: Overview · Medical History · Dental History · Forms & Documents · Examinations · Images

Interactive Tooth Chart

- **32 anatomically-shaped teeth in a real dental arch** (Universal Numbering 1–32)
- 7 colour-coded conditions; 5 surfaces + per-tooth notes; **quick-paint brush**
- “**Mark all, then work backwards**” + reset; live counts; auto-save; embedded into reports

Clinical Notes & Treatment Plan

- Notes in 4 types (finding, treatment plan, follow-up, observation), auto-save, tooth links, quick templates
- Treatment plan items with priority (Urgent / Important / Routine), tooth, timeline, cost
-  **Offline voice typing** (Windows Win + H) on notes & treatment fields — nothing leaves the computer

Treatment Report

- One-click **professional PDF**: clinic header, patient details, medical alerts, **embedded tooth-chart arch**, findings by condition, grouped notes, prioritised plan table, summary, signature block
- **Generated in the patient’s language** (EN / ES / AR, Arabic RTL) — labels translate, typed notes stay as written
- **Approve & sign**; distribute by **Print** (real Windows print dialog), **Save PDF**, or **Email** (SMTP or offline mail-client fallback)

Consent Forms

- Multi-section consent (Treatment, Privacy/HIPAA, Liability, Emergency, Right to Refuse, Financial) in **3 languages** (RTL Arabic)
- **On-screen signature pad**;  **Read aloud** using the computer’s built-in voice; signed PDF archived to the record

Documents & Images

- **Document archive** per patient (consents & reports) with open / print / reveal / email
- **Image management**: upload X-rays/photos, gallery, full-size viewer, delete — stored locally per patient

Settings & Administration (Admin)

- Clinic info (name, address, phone, license #, email, default language) — shown on all forms/reports
- Optional **SMTP email**; **user management**; **database backup** (export .db) & data folder; activity log

3 Languages & Localization

Area	English	Spanish	Arabic (RTL)
Consent form (content + signature labels)	✓	✓	✓
Consent read-aloud	✓	✓	✓
Patient Check-In kiosk (form + chips)	✓	✓	✓
Treatment report (labels / headings)	✓	✓	✓
Clinician portal	✓	—	—

4 Privacy & Offline Posture

- All patient data stays on the clinic computer — `%APPDATA%\giving-smiles\GivingSmilesData\` (SQLite database + per-patient file folders)
- No telemetry, no cloud, no internet dependency for any core function
- The only outbound action is if a user chooses to email a report
- Voice typing & read-aloud use on-device OS features — audio never leaves the machine

5 End-to-End Workflow

- 1. Front desk registers the patient — or hands them the **Check-In kiosk** to self-enter in their language
- 2. Patient **reads & signs consent** (optional read-aloud); signed PDF archived
- 3. Doctor marks the **tooth chart**, adds **notes** (typed, templated, or **dictated**), builds the **treatment plan**
- 4. Doctor clicks **Generate Report** → professional PDF in the patient's language
- 5. Doctor **approves/signs**, then **prints, emails, or saves**
- 6. Everything is **archived** to the patient record for future visits

6 Deployment & Updates

- **Windows installer (NSIS)** with Desktop/Start-menu shortcuts, plus a **portable** build
- Built automatically by GitHub Actions with a **permanent “latest” download link**
- Install on any number of clinic computers (each keeps its own local data); upgrades never touch patient data
- Not code-signed yet (Windows SmartScreen → *More info* → *Run anyway*)

7 Not Included Yet (Roadmap)

- Appointment scheduling · billing / insurance claims · cloud backup & multi-computer sync
- Multi-clinic support · native mobile apps · SMS / email reminders · analytics dashboards
- Advanced image annotation · AI “clean-up / summarise my dictation” (needs internet — omitted for privacy) · code signing

8 Version History

- **v1.0.0** — MVP: intake, multilingual consent + signature, dashboard, anatomical tooth chart, clinical notes, treatment report (print/PDF/email), document archive, images, auth, settings, kiosk
- **v1.1.0** — Reports in patient's language; consent read-aloud; translated kiosk; quick-pick medical history; tooth-chart "mark all"; quick-delete patient; version display; trimmed Dental section
- **v1.1.1** — Offline voice typing ( Dictate) for notes & treatment plan; permanent installer download link

Giving Smiles — Dental Clinic Management · Product Map v1.1.1 · Built for a busy dental practice: every click has a purpose, every record stays private and local.
